

Advanced Management Information System

Power MIS is an advanced reporting and analysis tool that provides a comprehensive view of PSAP activity and personnel performance. Power MIS provides PSAP managers with the detailed information needed to support the decision-making process.

Power MIS is the first public safety reporting product that provides complete end-to-end reporting – from the moment a 9-1-1 call is received to the second the emergency is resolved in Power CAD. Power MIS provides an extremely easy-to-use graphical user interface that allows you to refine your report parameters and immediately see the results.

Integrated Application Suite

Positron Public Safety Systems' fully-integrated suite of applications spans the entire workflow of public safety – from E9-1-1 emergency response to command and control.

Positron systems do more, share more and work together, right out of the box. They offer the benefits of the richest work environment available, without costly and ongoing post-deployment integration. Positron's approach is the only path to an affordable, feature rich and evolving system – with a single number to call when you need expansion or support.

Product Highlights

Power MIS retrieves critical information such as the time a call was received, how long it took for a call to be answered, questions that were asked by the operator, the answers the caller provided, and the agencies to which a call was transferred. With Power CAD dispatch data, Power MIS can provide statistics on call and incident dispatching times and agency response. Power MIS can generate statistics to evaluate a PSAP's overall results, or an individual call-taker's performance.

- Generate comprehensive reports
- Powerful graphing capabilities
- Schedule the automatic generation of reports
- Print call, incident and dispatch reports
- Plot call, incident and dispatch response data on a map
- Export reports to a variety of applications, such as Microsoft Word, Excel and Adobe Acrobat (PDF)
- Perform detailed queries on call, incident and dispatch handling activities of one or more emergency response centers
- Ad-hoc reports
- Configure shifts and time windows
